U. S. Patent and Trademark Office PTO-326 (Rev. 3-97) Art Unit: 2642

CLAIMS

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-2, 4-10, are rejected under 35 U.S.C. 102(b) as being anticipated by Bertolet (US 5694452).

Regarding claim 1, Bertolet shows:

Programming a telephone assembly (fig. 1) having means to receive and transmit a message to one or a plurality of phones (14-18, fig. 5);

Providing a programmed telephone assembly (fig. 1) to a user, the telephone assembly being housed in housing means (10) having theme identification means (see 14-18) for identifying a theme associated with the phone service.

Regarding claim 4, Bertolet shows:

A telephone assembly (fig. 1) having means to receive and transmit a message to another phone (fig. 5);

Programming means (14-18) for programming the telephone assembly (fig. 1) to transmit a message to one or a plurality of other phones (see operation of 14-18, fig. 5);

Art Unit: 2642

Housing means (10) housing the telephone assembly, the housing means having theme identification means (see 14-18) for identifying a theme associated with the other phones.

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 3, 11-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bertolet in view of Hensley (US D318468).

Regarding claims 3, 11, 13-16, Bertolet shows the housing means (10).

Bertolet differs from the claimed invention in that it does not explicitly mention that the housing means can be in different shapes, such as a star or sexual shape, including their respectively services, such as astrology or sexually related services.

However, phones in various shapes are commonly seen. This is also shown by Hensley, such as the phone designed in sexual shape (see fig. 1). Further, from the various shapes shown in the present application, it can also be seen that phones can be in various shape. Therefore, it would have been obvious for one skilled in the art to design Bertolet's phone in any shapes, including the star or sexual shape, with/without the teaching of Hensley, this simple can be considered as a variation of Bertolet, as long as the basic concept of programming the phone is substantially unchanged.

Art Unit: 2642

Further, the basic concept of programming the phone is well taught by Bertolet, the type of pre-recorded messages is dictated by the intended use of the phone, in the Bertolet case, the phone is intended to use to call the police, therefore, the message is an emergency related service. Therefore, when the phone is intended to use with an astrology or sexually related service, it can certainly be programmed to have the message in such service, this simply is an intended use for the Bertolet device and would have been obvious for one skilled in the art without altering the basic concept of Bertolet.

Regarding claims 2, 5-10, 12, Bertolet shows:

The theme identification means (14-18, 10) is the shape or pattern of the housing means:

The theme identification means (see 14-18) for identifying a theme associated with the phone service;

The programming means (14-18, fig. 5) is a key pad having pre-programmed phone numbers;

Connection actuating means and disconnection means (23d); and

The phone assembly cannot receive incoming telephone calls (col. 2, lines 41-42).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jack Chiang whose telephone number is 703-305-4728. The examiner can normally be reached on Mon.-Fri. from 8:00 to 6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ahmad Matar, can be reached on 703-305-4731. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
